

MAIN EVIDENCE FROM THE FOCUS GROUP FOR EVALUATION

Positive: the whole group agree on the good result of the Math Games Day at Istituto Comprensivo Cena on the 24th May 2016. The event has been very appreciated by students, families and by local association of adults. The teaching activities in the classes have been planned in time and we have now some teaching materials made by students. Some game strategies have been provided.

Critics: We need to provide more meetings for adults, who have asked for a technology course at school to learn how to use computer. They would like to be more actively involved in the events provided by the school. We think that a deeper involvement could make them be closer to all that subjects related to the learning activities, especially for those under skilled people who, for several reasons, are not interested in educational pathways.

Evaluation: The group agrees on next year Math Games Day, with the participation of the adults, not only the parents association. Furthermore, it will be provided a learning unit for those teachers who want to be more active in developing a deeper impact of the project on the students.
